DodgerBlue

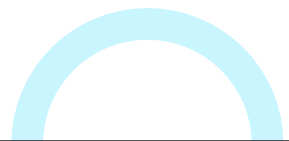

MediumSeaGreen

Violet

LightGray

## Color Types

HTML colors are specified with predefined color names, or with **RGB**, **HEX**, **RGBA**, values.

## Most used colors

Most used html colors are **RGB**,  
**HEX** and **color names**

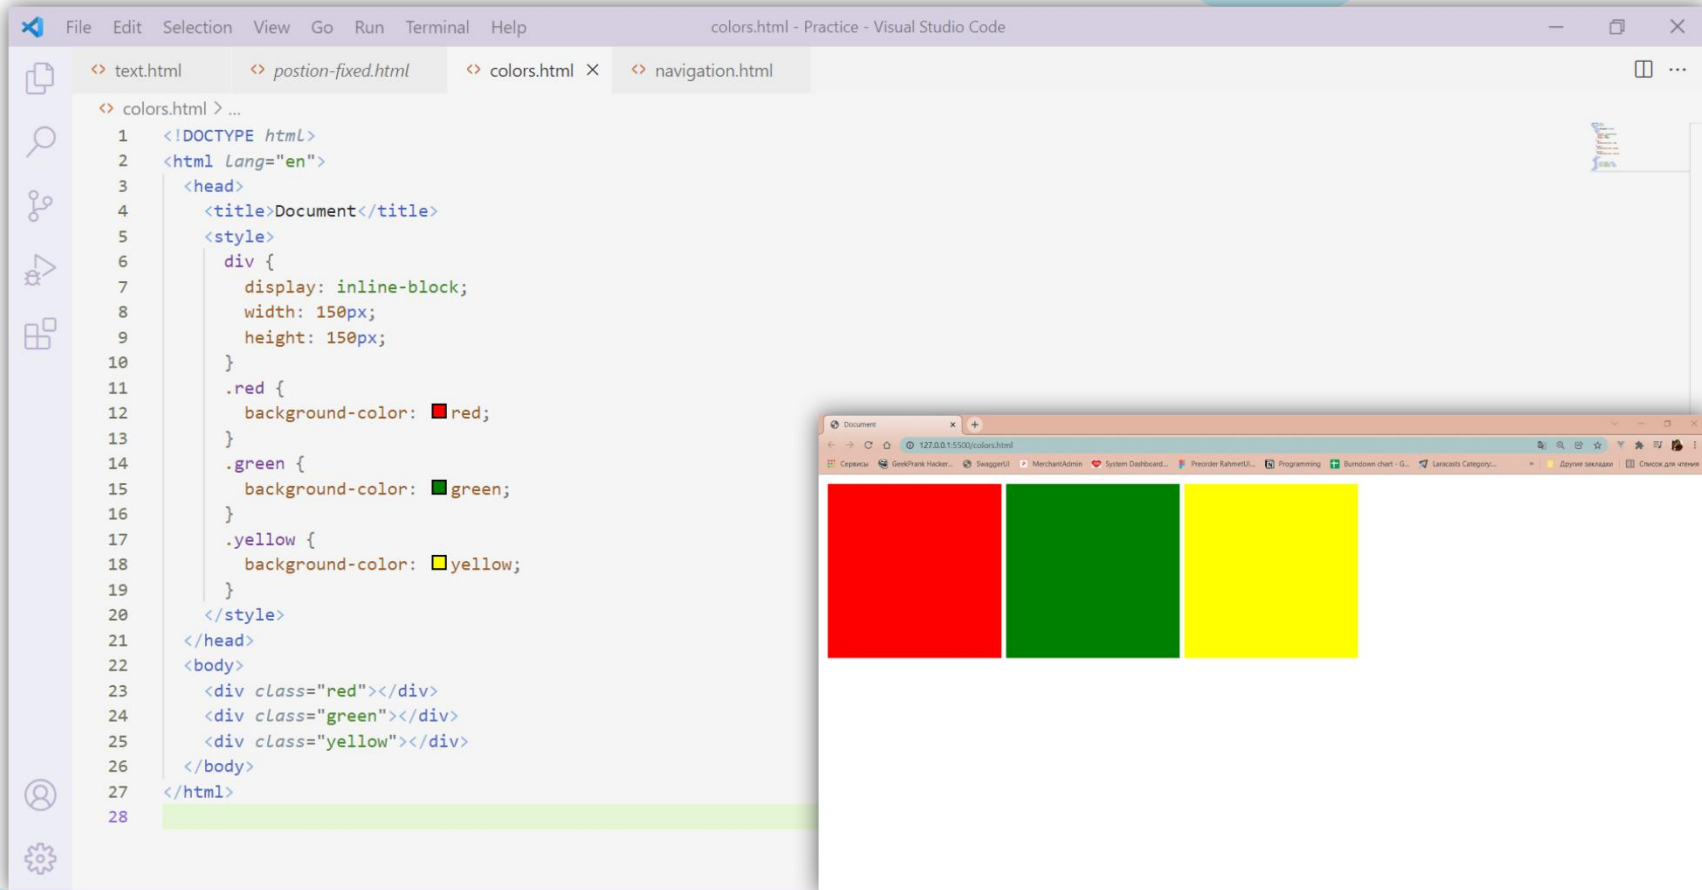

**red** -> color name

**rgb(255, 0, 0)** -> RGB color

**#FF0000** -> HEX color

Now let's see it with more  
details

## RGB colors

An RGB color value is specified with the `rgb()` function, which has the following syntax:  
`rgb(red, green, blue)`

Each parameter (red, green, and blue) defines the intensity of the color and can be an integer between 0 and 255 or a percentage value (from 0% to 100%).

```
rgb(0,0,255)
```

# Hexadecimal colors

A hexadecimal color is specified with: #RRGGBB, where the RR (red), GG (green) and BB (blue) hexadecimal integers specify the components of the color. All values must be between 00 and FF.

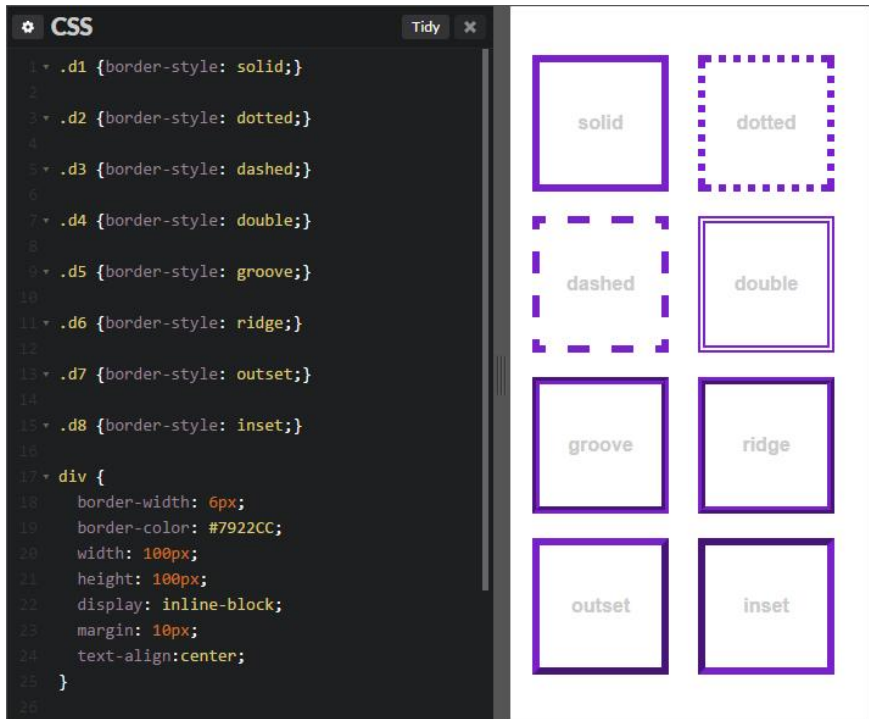

#00ff00

**02**

# **Borders**

# borders

The CSS **border** properties allow you to specify the style, width, and color of an element's border.

# CSS Borders

**border-width: 1px;** // here you should give width of your border  
**border-style: solid;** // here you should give style of your border [dotted, dashed, double]  
**border-color: red;** // here you should give color of your border

You can write all these properties in one line of code.

**border: 1px solid red;**

**03**

**Radius**

# CSS rounded Borders

The border-radius property is used to add rounded borders to an element:

```
p {  
  border: 2px solid red;  
  border-radius: 5px;  
}
```

Elemento 1

```
Elemento1 {  
  width: 100px;  
  height: 100px;  
}
```

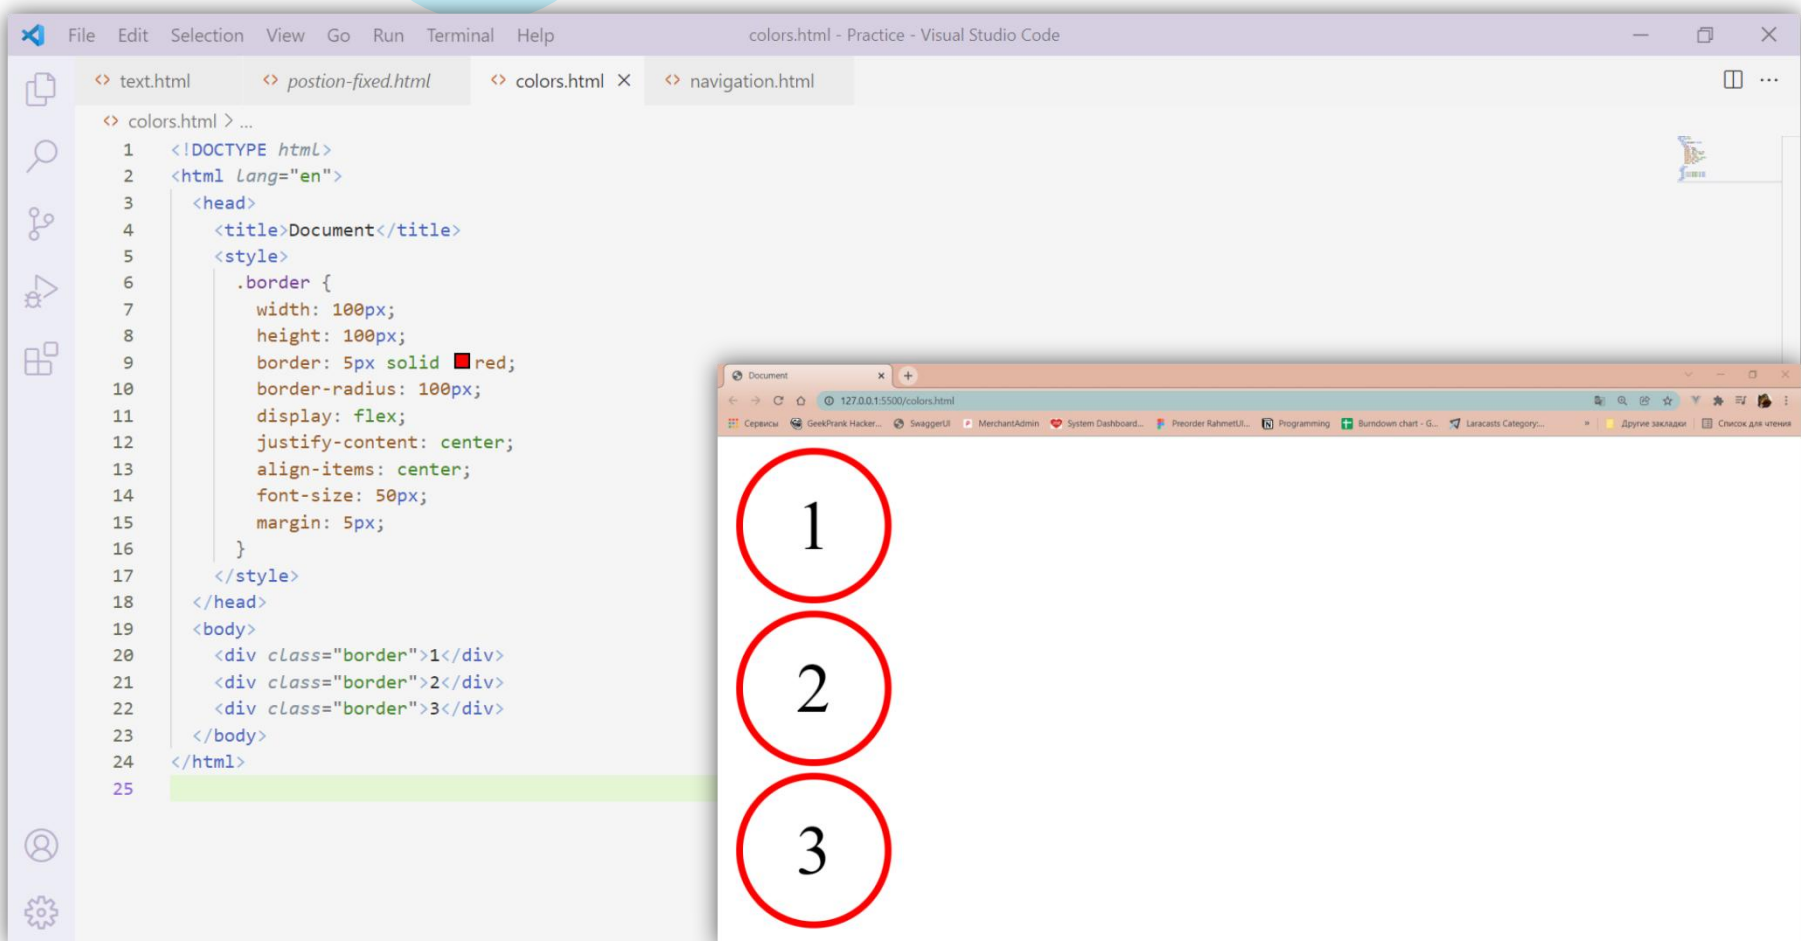

Elemento 2

```
Elemento2 {  
  width: 100px;  
  height: 100px;  
  border-radius: 10px;  
}
```

Elemento 2

```
Elemento3 {  
  width: 100px;  
  height: 100px;  
  border-radius: 50px;  
}
```

# Shadows

1

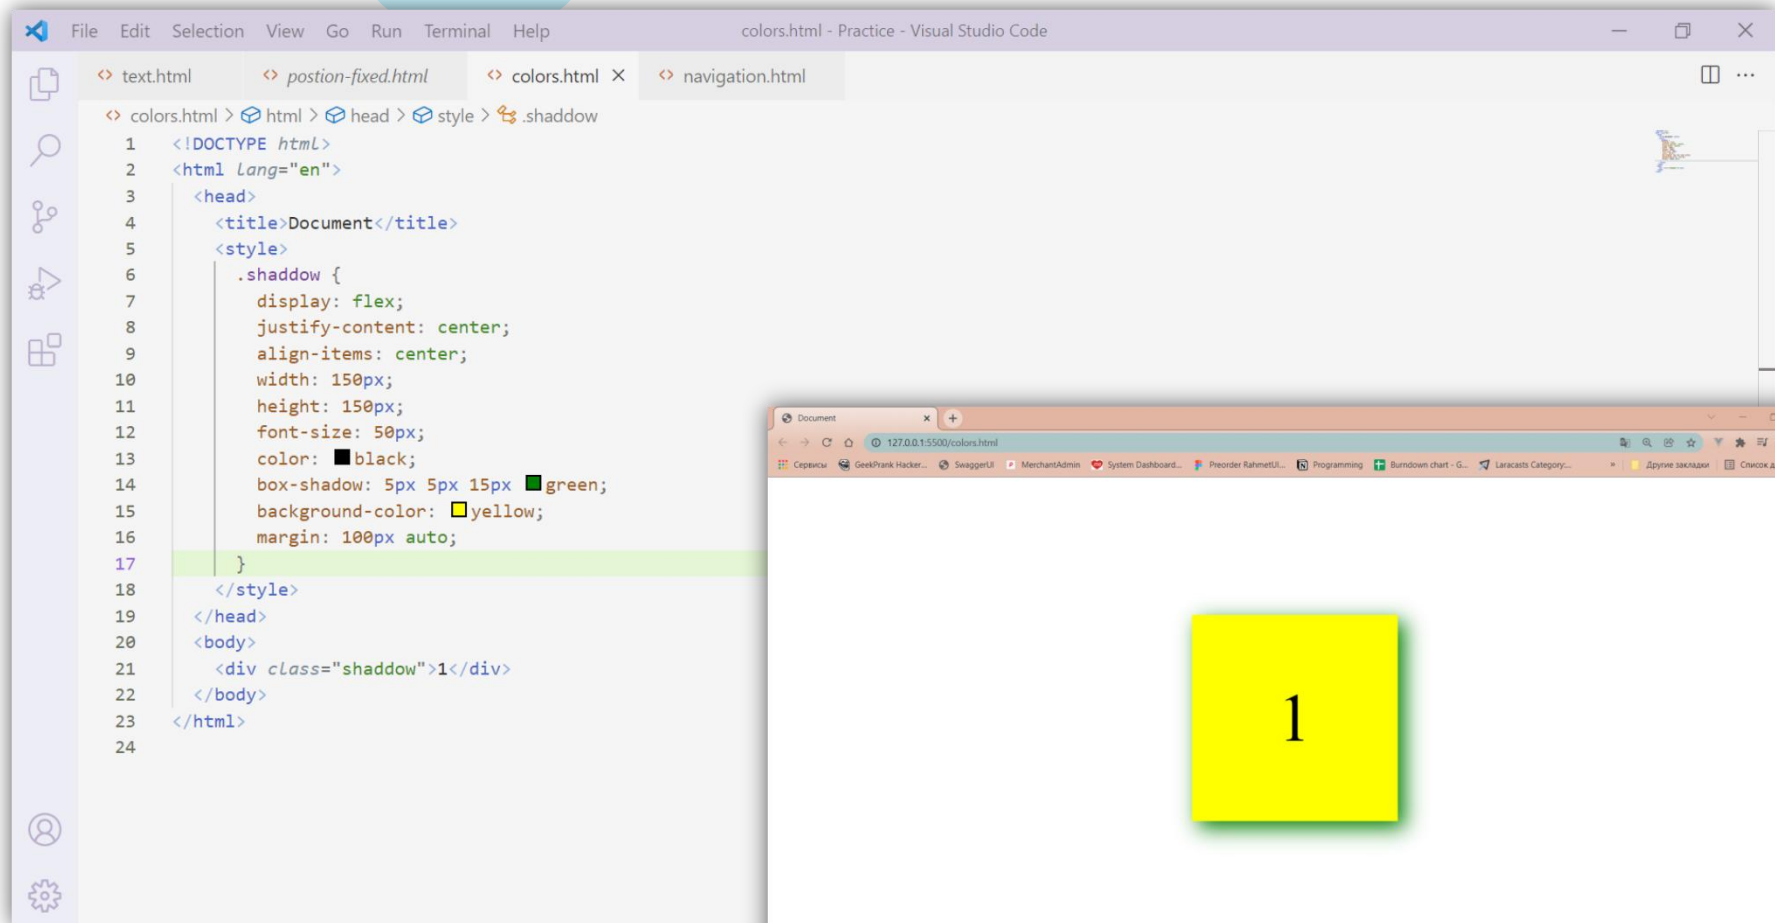

## **box-shadow Property**

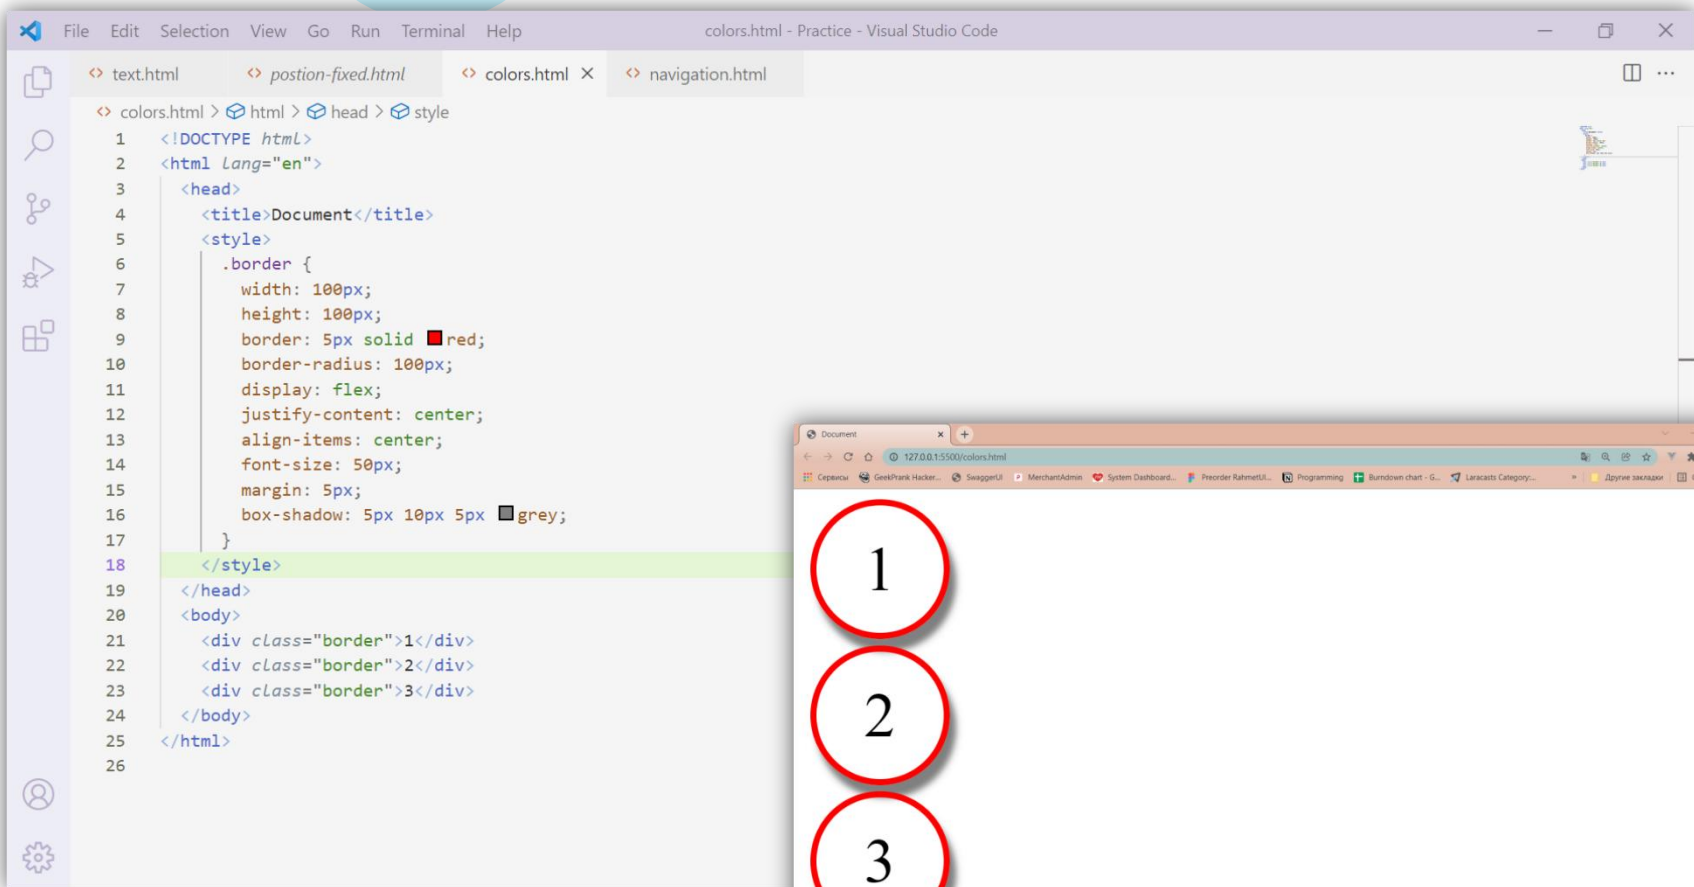

The box-shadow property attaches one or more shadows to an element.

## Box-shadow in practice

**box-shadow:** 5px 10px 5px 10px #888888;

1. First value is for shadow horizontally, it can be negative number.
2. Second value is for vertical shadow, here also can be negative number.
3. Third value is for spreading color,
4. After that we can give shadow color

```
File Edit Selection View Go Run Terminal Help colors.html - Practice - Visual Studio Code

< text.html < position-fixed.html < colors.html X < navigation.html

colors.html > html > head > style
1 <!DOCTYPE html>
2 <html Lang="en">
3   <head>
4     <title>Document</title>
5     <style>
6       .border {
7         width: 100px;
8         height: 100px;
9         border: 5px solid red;
10        border-radius: 100px;
11        display: flex;
12        justify-content: center;
13        align-items: center;
14        font-size: 50px;
15        margin: 5px;
16        box-shadow: 5px 10px 5px grey;
17      }
18    </style>
19  </head>
20  <body>
21    <div class="border">1</div>
22    <div class="border">2</div>
23    <div class="border">3</div>
24  </body>
25 </html>
26
```

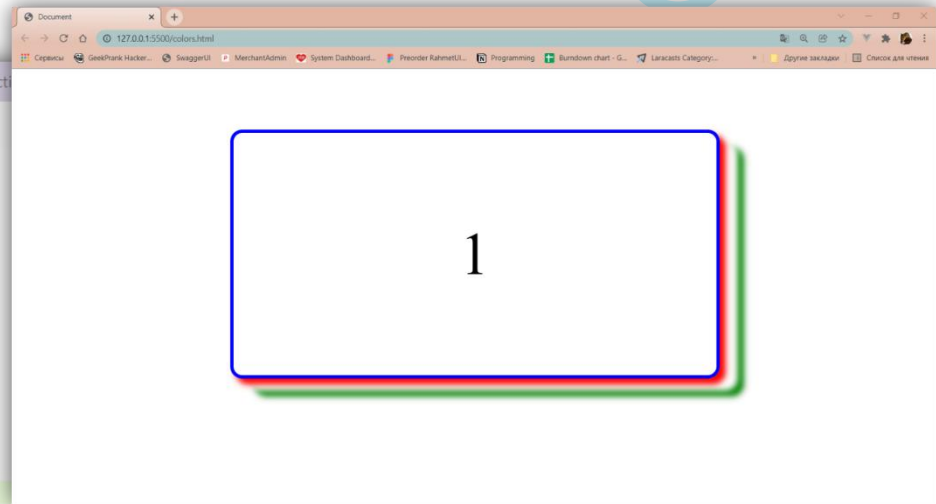

File Edit Selection View Go Run Terminal Help colors.html - Pract

text.html position-fixed.html colors.html X navigation.html

colors.html > html > head > style > .border

```
1 <!DOCTYPE html>
2 <html Lang="en">
3   <head>
4     <title>Document</title>
5     <style>
6       .border {
7         width: 400px;
8         height: 200px;
9         border: 3px solid blue;
10        border-radius: 10px;
11        display: flex;
12        justify-content: center;
13        align-items: center;
14        font-size: 50px;
15        margin: 50px auto;
16        box-shadow: 5px 5px 5px red, 15px 10px 5px white, 20px 15px 5px green;
17      }
18    </style>
19  </head>
20  <body>
21    <div class="border">1</div>
22  </body>
23 </html>
24
```

We can add multiple shadow, dividing them by comma in box-shadow.

Be happy and Smile

**Thanks!**
